3 Penny Cryptos That Could Be Millionaire Makers

Being the earliest of investors in cryptocurrency can lead to life-changing wealth, but you don't have to own a cryptocurrency the same day it's released to make more money than you'll know what to do with.

For example, Bitcoin was released in 2009 – but even if you started owning it some six years after it was released in 2015, one Bitcoin was worth \$315.

Today, that Bitcoin is worth just over \$47,000.

So even if you feel like you've been late to the game in investing in cryptocurrencies, remember that you're still an early investor – only 13% of Americans bought or traded a cryptocurrency from July 2020 to July 2021, according to CNBC.

And as we speak, there's a whole new class of cryptocurrencies that have emerged – that we like to call microcurrencies – that are trading for just pennies. As we share this information, we also want to remind you that there are always risks involved with any investment, and a key rule of thumb is to never invest what you can't afford to lose.

Having said that, if you understand your risk tolerance, we are going to share with you three of those coins that, according to projections from DigitalCoinPrice.com, could be millionaire makers.

The three cryptos we're going to share today are all in the artificial intelligence space – a sector with a \$62.35 billion market value in 2020. By 2026, that's expected to climb to nearly \$300 billion.

Now, the purpose and projects these cryptos will serve are very technical, and we don't want you to feel like you need an advanced degree in computer science to understand what's going on.

That's why we're just going to share the broad details about each crypto coin so that you'll know the most important thing – how it can make you a lot of money!

Penny Crypto #1: Matrix AI Network (MAN)

Team: Owen Tao (CEO), Steve Deng (Chief AI Scientist), Bill Li (Chief Network Architect), Tim Shi (Chief Chip Scientist)

White Paper: <https://www.matrix.io/assets/dropdown/MATRIXTechnicalWhitePaper.pdf>

2028 Price Projection: \$0.33

Matrix AI Network offers a unique concept in that it's using artificial intelligence that can learn new things on the blockchain.

That means it can adapt to technological advances as opposed to being an old way of doing things that eventually become obsolete.

With Matrix AI, you will also eventually be able to use it to perform a function without needing to know how to code or write commands for programs. For example, if you wanted to execute a smart contract between a home buyer and home seller, within Matrix AI, you could theoretically tell it to store the deed to the house, store a currency in a smart contract, and release the contract to the buyer and the payment to the seller when both parties have met their obligations and have signed off on the contract.

Matrix also says that it can be used for health applications – allowing you to check key health stats in the morning, being recommended meals based on your readings, and so much more.

Again, you wouldn't have to know how to program any of that. Eventually, you could potentially just tell Matrix AI what you want to be done, and it would handle the rest.

MAN is currently trading for \$0.07 as of this writing, but price projections from DigitalCoinPrice.com suggest it could climb in price every year and could eventually reach \$0.33 by 2028.

Year	Price Forecast
2022	\$0.12
2023	\$0.16
2024	\$0.19
2025	\$0.22
2026	\$0.25
2027	\$0.30
2028	\$0.33

From \$0.07 to \$0.33 is a 371% profit and is enough to turn a \$5,000 investment into \$23,550, a \$10,000 investment into \$47,100, a \$100,000 investment into \$471,000, and a \$250,000 into \$1.1 million.

Remember, these estimates may even be conservative as blockchain and AI technology rapidly advance and bring forth changes and profit opportunities faster than anyone can imagine.

Penny Crypto #2: SingularityNET (AGIX)

Team: Ben Goertzel (CEO and Chief Scientist),
Simone Giacomelli (Head of Business Development),
Cassio Pennachin (CTO)

White Paper: <https://public.singularitynet.io/whitepaper.pdf>

2028 Price Projection: \$1.63

With all of the AI programs being developed, there is one glaring issue – most of the programs won't have a way to interact with each other and share data.

An artificial intelligence program that predicts the weather may not be able to share that information with an artificial intelligence program that predicts flows in traffic for your morning commute. Being able to use that information about the weather, the information about your morning commute could be drastically more accurate.

That's just one simplified example, but when AI programs can't interact with other programs, it can limit the value of the technology and hold back the full benefits it could provide to society.

That's where SingularityNET comes in.

It wants to help developers bridge AI connections over a decentralized network for the benefit of everyone.

Right now, it's only \$0.35 per coin.

Year	Price Forecast
2022	\$0.61
2023	\$0.71
2024	\$0.91
2025	\$1.08
2026	\$1.24
2027	\$1.35
2028	\$1.63

From \$0.35 to \$1.63 is a 365% profit and is enough to turn a \$5,000 investment into \$23,250, a \$10,000 investment into

\$46,500, a \$100,000 investment into \$465,000, and a \$250,000 investment into \$1.1 million.

Penny Crypto #3: Fetch.ai (FET)

Team: Humayun Sheikh (CEO), Toby Simpson (COO), Thomas Hain (CSO), Jonathan Ward (CTO), Maria Minaricova (Director of Business Development)

White Paper: <https://fetch.ai/wp-content/uploads/2019/10/Fetch.AI-Token-Overview.pdf>

2028 Price Projection: \$3.52

Fetch.ai has a lot of applications and use cases, but we'll walk you through a few of them.

One is its Autonomous AI Travel Agents, which aim to help reduce the need for middlemen for booking trips. In essence, you wouldn't need to use sites like Airbnb ever again. The team for Fetch says it will provide for a more personalized experience, and they believe it can help with security – because information won't be stored on a company's website.

Rather, it will be kept private and safe on the users' smartphones.

Fetch could also have applications in smart cities. Instead of driving around the block – endlessly trying to find a space – with a program from Fetch, your car could interact with its surroundings and connected parking spaces to know where there's an open spot.

Speaking of cars, your cars could also eventually be able to read road signs and provide you with information that's relevant to your journey.

If you tell your car you want to use a restroom or are hungry, it can use the road signs to know how far away you are from a rest stop or a restaurant.

We encourage you to visit Fetch.ai to see the full list of potential use cases.

Trading for \$0.78 right now, the FET forecast shows the price reaching \$3.52 by 2028.

Year	Price Forecast
2022	\$1.33
2023	\$1.65
2024	\$2.05
2025	\$2.36
2026	\$2.79
2027	\$3.23
2028	\$3.52

From \$0.78 to \$3.52 is a 351% profit and is enough to turn a \$5,000 investment into \$22,550, a \$10,000 investment into \$45,100, a \$100,000 investment into \$451,000, and a \$250,000 investment into \$1.1 million.

Conclusion

With the artificial intelligence market becoming even more valuable and crypto projects developing game-changing programs, the three cryptocurrencies we've listed above could create a lot of wealth in the next decade.

It's not often that you can find an investment that will turn just \$5,000 into more than \$20,000 in under 10 years, but those are the types of possibilities that are out there for crypto investors.

The more you invest, the more you could make.

Again, you should never invest what you can't afford to lose. But we hope that the three cryptocurrencies that we put on your radar today can help put you on the fast path to achieving life-changing wealth.

PLEASE NOTE

From time to time, Money Map Press will recommend stocks or other investments that will not be included in our regular portfolios. There are certain situations where we feel a company may be an extraordinary value but may not necessarily fit within the selection guidelines of these existing portfolios. In these cases, the recommendations are speculative and should not be considered as part of Money Map Press philosophy.

Also, by the time you receive this report, there is a chance that we may have exited a recommendation previously included in our portfolio. Occasionally, this happens because we use a disciplined selling strategy with our investments, meaning that if a company's share price falls below a certain price level, we immediately notify our subscribers to sell the stock.
